

The CBB toolkit, one Project. Done in your own AI chat.

Eight tools. Copy a prompt, paste your own details in where you see [brackets], send it. Run them in one Project and the last one turns everything into a finished deck.

Words in [brackets] are yours to change. Leave the rest.

THREE THINGS BEFORE YOU START

01

Get a paid seat, web search on

Claude or ChatGPT, Pro/Plus or above.
Free plans won't have enough of either.

02

Open one Project

Name it after your pairing — e.g. "CBB
Ireland–Netherlands". Run every
prompt below inside it.

03

Optional: grab the brand kit

Logo + deck template (.zip) — drop
them into your Project so anything it
builds already looks like AIMS.

The machine prepares. You decide. Companies and job titles only — **never people.** Check every source before you call.
Real assignments still get logged in **Ezekia.**

WHAT'S HERE

1. Strategy & operating model check
2. Internal one-pager
3. Opportunity checklist
4. Conversation & pitch guide
5. Capability card
6. Client presentation
7. Case study
8. Pipeline & KPI dashboard
9. Turn it into a deck

1**Stefan**

Strategy & operating model Does this qualify as CBB?

The rules aren't a prompt — they're fixed. This checks a real situation against them.

Here are AIMS's Cross-Border Business (CBB) rules:

- CBB applies when two or more AIMS partners make a documented, commercially relevant contribution to winning, managing or delivering a client assignment.
- The originating partner owns the client relationship.
- In principle the receiving partner leads and delivers the assignment, unless the client specifically expects the provider to stay responsible.
- The fee split is set by AIMS's bylaws; the origin partner's fee is reported by the provider entity for network statistics.
- The provider normally invoices the client, unless the client needs to be invoiced by the receiving entity for tax or accounting reasons.
- If the originating partner doesn't already know their counterpart, they notify that country's Managing Partner, who assigns a receiver.
- The provider's quality standards apply, since they usually know the client best.

My situation: **[describe the client, which offices are involved, and who is doing what]**

Using the rules above: does this qualify as CBB? Who owns the client relationship, who should lead delivery, and what's the likely fee split? Flag anything the rules don't clearly cover.

2**Stefan**

Internal one-pager CBB in plain English

Turns the same rules into a one-page reference for anyone who hasn't read the policy.

Summarise the following into a single internal one-pager for consultants in **[your office, e.g. AIMS Netherlands]**: what CBB is, when it applies, how to log it in Ezekia, and who to contact if unsure. Plain English, one page, no jargon.

Source material:

[paste the CBB rules from Step 1, plus anything else you have — the Ezekia CBB playbook, local notes, etc.]

Scores one named client, band A/B/C. Log the result in Ezekia as a note on that account.

Score this account against AIMS's CBB opportunity checklist.

Client: [client name]

Consultant: [your name]

Countries involved: [e.g. Ireland, Netherlands]

Checklist – mark each yes/no with a one-line reason:

1. International Client Footprint

- Does the client operate subsidiaries, production sites or sales offices in other countries?
- Is the client planning international expansion, acquisitions or new market entry?
- Are international operations managed centrally or locally?
- Do we have access to decision-makers at headquarters or in international subsidiaries?

2. International Leadership & Recruitment Needs

- Are management or specialist positions currently vacant in other countries?
- Are new international leadership positions expected within the next 12-24 months?
- Are there succession risks or planned management changes in international subsidiaries?
- Does the client face difficulties attracting qualified executives or specialists in particular markets?

3. Talent Management Opportunities

- Does the client need a consistent leadership assessment approach across countries?
- Are international management development or executive coaching programmes planned?
- Is there a need for succession planning or leadership audits across multiple locations?
- Are international leadership teams being established, integrated or reorganised?

4. Client Relationship & Commercial Potential

- Do we have a trusted relationship with a relevant decision-maker?
- Is there a concrete business challenge or upcoming decision that creates demand?
- Does the client have an identified budget, decision process or realistic purchasing timeframe?
- Could our international network offer a demonstrable advantage over the client's current providers?

5. Internal CBB Collaboration

- Do we have suitable consultants and delivery capabilities in the relevant countries?
- Is there a colleague who could contribute local expertise, client access or project delivery?
- Are the client owner, delivery responsibilities and commercial arrangements clear or ready to agree?
- Is there a concrete next step to initiate collaboration with another country?

Total the yes answers (1 point each) and give the band: A (more than 12, concrete

potential), B (more than 6, potential but unconfirmed), C (6 or fewer, no actionable demand yet). Use web search for anything you can check publicly; say "can't verify" rather than guessing on the rest.

*For the committee: Mark's Radar concept uses a different 5-level grade instead of A/B/C — Strong relationship (qualify immediately), No known blockers (standard), Real unknowns (investigate first), Real friction (park), Structural block (don't pursue). Worth discussing whether to upgrade to this before the AGM; kept as A/B/C here since Kerstin's existing data already uses it.

Conversation & pitch guide Turn an introduction into a pitch

Three prompts, same conversation. Use once you already know who you're talking to.

[See the full worked example ↓](#)

Know who you're talking to

I am a partner at AIMS International, an executive search network, based in [Ireland]. I'm preparing for a first conversation with our AIMS office in [the Netherlands] about working [beverage alcohol] accounts together.

Use web search. Companies and public information only, never people. Give a source and date for every claim; say "not published" rather than guessing.

1. What is AIMS [Netherlands]'s public specialism and sector focus, based on their published case studies and site content?
2. Which of their published sectors and mine ([beverage alcohol]) genuinely overlap, and which don't?
3. If I already have a contact there ([name / role, if known]), what's publicly known about their background and focus area?
4. What are two or three genuine, evidenced reasons our two offices could work well together on [beverage alcohol], and what's the honest counter-argument I should be ready for?

Put this in a short document titled "Briefing: [Ireland] x [Netherlands] conversation prep". Plain English, one page if possible.

Build the pitch

I am a partner at AIMS International. I'm building the pitch for a cross-border conversation between our [Ireland] office and [Netherlands] office, in [beverage alcohol].

Use web search for market facts; say "unverified" rather than guessing.

Structure the pitch in four parts:

1. Geography – where does [beverage alcohol] talent and client demand actually sit across [Ireland] and [Netherlands]? Trade flows, shared ownership, routes to market.
2. Talent pool – what does the leadership talent pool look like in each market for this sector? Where is it thin, where is it deep?
3. Value proposition by market – what does AIMS bring to a client in each country that a local-only search firm can't?
4. Proof points – two or three believable, generic examples of the kind of cross-border placement this partnership could deliver (illustrative, not real named cases unless I give you one).

Put it in a document titled "[Ireland] x [Netherlands] pitch: [beverage alcohol]", written for a client conversation: confident, concrete, no internal jargon, one idea per section.

Follow-ups – three, same conversation

Turn this into a one-page leave-behind a client could keep after the meeting: a headline, the two-market case in three bullets, one proof point, and how to start. No internal AIMS jargon.

What are the three hardest objections a client would raise to a cross-border search partnership, and how would I answer each in two sentences?

Tailor this pitch for a [30]-minute call with [client name / role], focused on [their priority]. Keep the same structure, cut anything they won't need.

5 **Kerstin** **Capability card** What can you actually do?

A short, standard card any partner can scan before proposing a joint account.

Build a capability card for [consultant name / office] in this format:

- Sectors covered
- Fee ladder by seniority level (C-level, Director, Manager, Middle Management, Staff)
- Notable placements (no confidential client detail)
- Years active in search
- Key contact details

Source: [paste a bio, LinkedIn summary, or background notes]

6 **Unassigned** **Client presentation** Pitch the network, not one office

External-facing. No CBB, Ezekia, or scoring language belongs in a client's copy.

Build a client-facing pitch outline for AIMS's cross-border capability, for [client name], sector [sector], pairing [your office] and [the other office].

Cover:

1. The combined network's reach – countries, scale, relevant sector experience.
2. Why this specific pairing – what each office brings.
3. Relevant past placements (no confidential detail).
4. A clear call to action.

Professional, external tone. No internal jargon – no "CBB", no Ezekia, no scoring language.

7

Unassigned

Case study Turn a placement into proof

Run once per placement. Three to five good ones is the target.

Turn this completed placement into a client-facing case study: challenge, approach, result, in three short paragraphs. Anonymise anything confidential. Keep it factual – no invented numbers.

Raw facts: [paste the placement details – client, role, countries involved, timeline, outcome]

8A

Mark

Pipeline & KPI dashboard Not built yet

Mark's AIMS Radar concept sketches this, but it needs clean, complete Ezekia data from every country first – not there yet. No prompt to run here.

AGM ask: Central Ops (Kerstin) to formalise a live tracker sourced directly from Ezekia, contingent on full network adoption. Raise as its own agenda point, alongside the A/B/C-vs-grade question above.

8b – Search Health Dashboard

Mark

Already exists, already in use – tracks one live assignment day to day. A different job to 8a: one search's health, not the network's pipeline.

LAST STEP**Turn it into a deck**

Once you've run whichever steps apply to you, in the same Project, this pulls it all together as a real, downloadable PowerPoint.

You've now run the CBB prompts in this Project. Turn it into a downloadable PowerPoint deck for [an internal review / the AGM / a partner meeting]: one slide per section, headline first, only real numbers and sources – nothing invented.

Style it in AIMS International's branding: near-black (#0E0E0E) and orange (#DC613A), clean sans-serif, plenty of white space, one idea per slide.

Title it "[your pairing] – Cross-Border Business Review".

Doesn't come out looking right? [Download the blank AIMS template](#) and paste the text in instead.

New pairing or sector? Start a new Project, work through the steps again with your own details, and finish with this same prompt.

See it in action: Ireland × Netherlands

Step 4's first two prompts, run for real ahead of a first call with AIMS Netherlands — the actual documents they produced, not a summary of them. Kept here as proof the prompts hold up even when the honest answer isn't a clean sector match.

Prompt 1 output — Briefing: Ireland × Netherlands conversation prep

AIMS Netherlands has operated from Eindhoven since 2000, also covering Belgium, with a team of around eight people. Managing Director Rolf Heeb leads the office; the two Associated Partners are Hans Oomes, based in Breda, and Tom Verhoeven, based in Eindhoven. Hans's background is in industrial and technology corporates — Xerox, KPN, Siemens, Johnson Controls/TYCO and KONE — before moving into search. Tom's background is in search and staffing itself, at Optica Search en Consulting and AgileOne. Rolf's background isn't independently verified here — worth asking directly.

Published sector focus, per their own site: finance, logistics & e-commerce, industrial, IT & engineering, pharma & life sciences, and retail.

Overlap with Ireland's beverage-alcohol focus: none published. That's worth saying plainly rather than working around it — a pitch that opens on "let's work beverage-alcohol accounts together" won't land with this office as it stands today.

Three genuine, evidenced reasons the two offices could still work well together:

1. **Geography** — Rotterdam and Schiphol are the EU's primary logistics gateways, relevant to any Irish client in any sector expanding into continental Europe, not just beverage alcohol.
2. **Sector** — AIMS Netherlands' own pharma & life sciences specialism lines up with Ireland's substantial pharma multinational manufacturing base. This is the one real, evidenced overlap.
3. **Scale** — an eight-person office is a realistic operational match for a joint pilot, rather than a large counterpart neither side can move quickly with.

The honest counter-argument to be ready for: there is currently no sector overlap in AIMS Ireland's actual specialism, and no prior CBB collaboration between these two offices to point to. The credible opening is pharma/industrial/logistics, not beverage alcohol — or, failing that, purely relationship-building for whichever pairing comes next.

Sources: aimsinternational.com/company/aims-netherlands · rocketreach.co partner profiles (Hans Oomes, Tom Verhoeven), Sept 2026.

Prompt 2 output — Ireland × Netherlands pitch: beverage alcohol — and the honest pivot

1. **Geography** — real, evidenced beverage-alcohol trade does exist between Ireland and the Netherlands, at a small enough scale to be credible rather than aspirational. The specific companies are deliberately left out of this document: naming real accounts inside AIMS' own specialism is a judgement call to make case by case with the people actually in the room, not something to freeze into a template that outlives the conversation it was written for.

2. **Talent pool** — in beverage alcohol specifically, the overlap is thin on both sides today: AIMS Netherlands has no published leadership bench in the category. In pharma & life sciences, it's deep on both sides — Ireland's biopharma manufacturing base is one of the largest in Europe, and AIMS Netherlands lists pharma & life sciences as a core specialism in its own right.
3. **Value proposition by market** — Ireland brings a deep biopharma leadership bench and an English-speaking base for EMEA-wide hires. The Netherlands side brings Rotterdam and Schiphol as the EU's logistics gateway, plus AIMS Netherlands' own industrial, IT/engineering and pharma bench.
4. **Proof points** — illustrative only, no real joint placement between these two offices yet: a European supply-chain or manufacturing-operations leadership hire for a pharma multinational's Irish site, sourced through the Dutch side's industrial network, is the kind of role this pairing could plausibly deliver first.

Recommended opening move: don't lead with beverage alcohol. Lead with the pharma/industrial overlap — it's real and evidenced. Treat beverage alcohol as a longer relationship-building thread for a future pairing, not the opening pitch for this one.

Sources: AbbVie's Irish operations carry a matching Netherlands entity · ICON plc, a Dublin-headquartered global CRO, already works across both markets. Beverage-alcohol trade evidence exists but is withheld here as sector-sensitive account intelligence.
